SECTION 1: PROFESSIONAL PROFILES
(All Variants Preserved Exactly as Written)

PROFILE VARIANT A: BUSINESS ANALYST FOCUS

Business Analyst | Data Solutions Specialist | Product & Project Manager

Results-driven Business Analyst with extensive experience in delivering technology-driven business solutions across diverse industries. Combining strong data analysis skills with technical knowledge to translate business requirements into actionable solutions. Proven track record of stakeholder management, process improvement, and delivering projects that drive measurable business value.

Core Strengths:
- Business requirements analysis and solution design
- Data-driven decision making and analytics
- Stakeholder engagement across all organizational levels
- Agile project delivery and process optimization
- Technical understanding of data platforms and cloud solutions

---

PROFILE VARIANT B: SOLUTIONS ARCHITECT FOCUS

Solutions Architect | Enterprise Data Specialist | Cloud & AI Strategist

Experienced Solutions Architect with a track record of designing and delivering enterprise-scale technology solutions. Combining deep technical knowledge of cloud infrastructure, data platforms, and AI/ML with strong business acumen to create solutions that deliver measurable value. Proven ability to engage stakeholders at all levels and lead cross-functional teams through complex implementations.

Core Strengths:
- Enterprise architecture and solution design
- Cloud-native platform development (AWS)
- AI/ML solution implementation
- Stakeholder management and C-suite communication
- End-to-end project delivery

PROFILE VARIANT C: DATA ENGINEER FOCUS

Senior Data Engineer | Cloud Platform Specialist | Python & AWS Developer

Senior Data Engineer with extensive experience building and maintaining scalable cloud-first data platforms. Strong expertise in Python, Scala, and AWS cloud services with a proven track record of delivering robust ETL pipelines, data lakes, and real-time processing solutions for enterprise environments.

Core Strengths:
- AWS data platform architecture and implementation
- Python and Scala for data processing
- ETL/ELT pipeline design and development
- Real-time and batch data processing at scale
- Infrastructure as Code with Terraform

PROFILE VARIANT D: DATA ENGINEER (SC CLEARANCE) FOCUS

Senior Data Engineer | Cloud Platform Specialist | AWS & Scala Developer

Senior Data Engineer with extensive experience building scalable cloud-first data platforms on AWS. Strong expertise in data pipeline architecture, ETL/ELT development, and cloud-native data solutions. Proven track record of delivering robust, production-ready data infrastructure supporting high-volume enterprise systems.

Core Strengths:
- AWS data platform architecture (S3, Lambda, EC2, SageMaker, Redshift, Athena)
- Scala and Python for data processing and pipeline development
- Terraform/Infrastructure as Code for reproducible data infrastructure
- Real-time and batch data processing at enterprise scale

PROFILE VARIANT E: ML/AI ENGINEER FOCUS

ML Engineer | AI Solutions Developer | Python & Cloud Data Specialist

Machine Learning and AI Engineer with strong Python expertise and hands-on experience building production-grade ML systems, LLM applications, and RAG pipelines. Proven track record of deploying AI solutions from prototype to production in enterprise environments.

Core Strengths:
- Python-first development (scikit-learn, TensorFlow, PyTorch)
- LLM application development and RAG pipeline architecture
- Production ML deployment on AWS (SageMaker, Lambda, EC2)
- End-to-end ML lifecycle (data prep → training → deployment → monitoring)

PROFILE VARIANT F: AI CONSULTANT FOCUS

AI Solutions Architect | Business Data Consultant | Machine Learning Implementation Specialist

Hands-on AI Consultant with proven expertise in designing and deploying production-grade AI/ML solutions across enterprise environments. Combining deep technical skills in machine learning, LLMs, and cloud architecture with strong stakeholder management to deliver tangible business value from ideation through to production deployment.

Core Strengths:
- End-to-end AI solution delivery (requirements → architecture → development → deployment → maintenance)
- Cloud-native AI infrastructure on AWS (Lambda, EC2, S3, SageMaker)
- RAG pipelines and LLM application development
- Cross-functional stakeholder engagement and C-suite communication

---

PROFILE VARIANT G: 2025 COMPREHENSIVE PROFILE

Remote | Leeds | London, UK

Collaborative contributor with Data Engineering teams, delivering Infrastructure as Code solutions through Terraform and CloudFormation, while leveraging cloud-native architectures and automated deployment pipelines to foster sustainable business growth and ensure regulatory compliance.

PROFILE VARIANT H: 2021 BUSINESS DATA SOLUTIONS PROFILE

Remote | Leeds | London, UK

A results-driven, commercially orientated, and customer focused business solutions specialist, with extensive experience as a leading technical business analyst and partner. Specialises in delivering a range of creative and strategic solutions to improve costs and productively, while working to minimise technical barriers through the use of smarter automation processes. Utilises a focused mind-set and critical thinking to employ key machine and learning-based products when required, in order to support business executives, teams, and stakeholders at all levels. A natural leader, accustomed to building and maintaining strong working relationships, while being noted as a main source of reliability. Implements a clear and collaborative leadership style, to encourage collaboration, creativity, and new ideas in the workplace.

PROFILE VARIANT I: 2020 EXECUTIVE PROFILE

Through my experience, I have become adept at overseeing sourcing and product development efforts, spearheading quality testing and control, as well as establishing strategic alliances with domestic and international vendors. As an accomplished professional my strengths have been in leading cross-functional teams to plan, build, launch and manage SaaS innovations by blending technology skills with extensive Agile, BDD/TDD, market orientation and analytical abilities to evolve products and strategy. Delivering prioritization and management of difficult projects within specification and or budget restrictions. I enjoy fostering positive relationships internally across all levels of management and externally with clients and business professionals.

CAREER OBJECTIVE: To build on business and technical acumen achieved over a career in various business industries. I would like to work with progressive organizations utilizing my skills attained in business and as a technologist, delivery specialist and Product focused individual to improve Business, IT, Project and Business Operations while forging key relationships to effectively build solutions that help realize and achieve company vision and business goals to enrich product offerings and build new business/product lines.

HIGHLIGHTS
- Understanding of the product development lifecycle.
- Proven experience defining, writing and documenting requirements in an agile scrum environment
- Translating requirements in to groomed user stories for the engineers to pick

up
- Fully understand the software development lifecycle through to delivery
- Experience working with both business and tech stakeholders to understand and translate requirements
- Have experience working in varied agile set-ups that requiring adaption of approach to the challenges within the project
- Take ownership of delivery milestones within your workstream (Task prioritization)
- Strong communication and technical skills with the ability to quickly grasp technical issues/concepts.
- Able to gather and analyze market data to develop business strategies.
- Customer Service and Employee Relations – Provide exceptional customer service when interacting with clients while championing the same in junior colleagues (BDD / TDD and when to apply these)

CORE COMPETENCIES
- Project Product Ownership (BDD & TDD)
- UX / UI Design
- Strategic Planning/Analysis
- Agile / Scrum Methodologies
- Training & Development
- SAAS Solutions project work
- Report & Documentation
- Product Lifecycle Management
- Leadership and Strategy
- Team Leadership
- Data Management and policy initiative - GDPR
- Process & Product Roadmaps
- Solutions for the Customer Focused

PROFILE VARIANT J: EARLY CAREER (BARCLAYS) PROFILE

As a Solutions Business Analyst I am familiar with the whole project lifecycle, having managed projects that have added significant value to previous employers - Barclays, Lloyds, WorldPay, Jones Lang LaSalle and Knight Frank. As a Consultant, my key strengths lie in Regulatory Change, Operational and Process re-engineering/ improvement, Data readiness for BI as well as executing Transformation, Divestment and Migration Projects. I am a Team Leader, with a proven ability to work in different functions. I excel in and enjoy the challenges of a diverse working environment both non-functional. I am solutions driven and goal oriented. I enjoy and focusing my expertise on reducing timescales and manpower through building smarter working and automation solutions.

- Business Analyst: over 7 years' experience working as a Business Analyst
- Finance Services Experience: over 7 years' experience (Debit/Credit Cards, Payments Chaps, BACS & Swift, Savings Retail)
- 2.1 BSc (Hons) Business Information Systems Degree
- Prince2 and ISEB Certified, BCS Associate Member
- Build and nurture relationships with stakeholders at all levels
- Business Requirement Gathering (TOM & Business Framework), Functional Specifications, Gap Analysis and Process Design
- Waterfall and Agile Project Management methodologies experience (User Stories and Use case writing and analysis, Product Backlog management)
- Regulatory Change, Regulatory Reporting, Operational and Process improvement, Change and Transformation Projects
- Big Data Experience: Consult for and work with Business Leads for the Implementation of Big data solutions most recently being the Rollout of Hortonworks Technologies (As-Is-To-Be) and integration with SAP Business Objects and Tableau for BI and MI technologies company wide
- Extensive BI and MI Analytics experience (Tableau, OBIEE, Crystal Reports, Business Objects, Qlikview, Salesforce)

- Advanced - ETL, SharePoint, SQL, Excel, Access and Relational Databases, PowerPoint (dynamic automation)
- Advanced Process Modelling (Flows, Visio, UML): Data and process mapping
- Advanced Data Modelling / Data Pattern & Profiling – (Advanced Excel, QlikView, SAP Crystal Reports, MS Access, MS Dynamics) Systems Reporting dashboards and automation build (Cognos, MS SQL Server) & Data Mapping
- Relational Databases & Normalization, Access databases and MS SharePoint (Document Management)
- SAP Business Objects (CRM Analytics)
- Commercial speculation/viability, Process change and analysis

---

SECTION 2: KEY ACHIEVEMENTS
(All Achievements from All CVs - Preserved Exactly)

2026 CV ACHIEVEMENTS

Achievement	Impact
Delivered Client Tendering Solution	Improved proposal accuracy and efficiency
Led Digital Transformation at GHD Hair	Streamlined ERP/CRM integration across global operations
Architected Data Solutions for enterprise clients	Enabled real-time analytics and BI reporting
£1.6M RFP delivered for Knight Frank	Successfully secured major contract
£1B PPI Savings Model at Lloyds	Financial modeling driving business value
Architected AWS Data Platform at OpenBet	Scalable infrastructure supporting real-time analytics for high-volume transactional systems
Led AI Innovation Lab	+20% project success rate, reduced operational costs
Delivered Enterprise Solutions across Banking, Retail, and Gaming	Transformed data operations enabling data-driven decision making
Built MIRA ACCT Platform	Autonomous cognitive computing system demonstrating advanced architecture capabilities
Built Enterprise Data Lake	Centralised data repository enabling cross-functional BI and ML
Implemented CI/CD for Data Pipelines	Reduced deployment time by 60%
Delivered Data Governance Framework	GDPR-compliant data handling across operations
Built MIRA ACCT Platform	Demonstrates advanced data engineering capabilities
Deployed ML-powered Client Tendering Solution	Production system improving proposal accuracy
Built MIRA AI Platform	Autonomous system with LLM orchestration, RAG pipelines, and vector-based knowledge retrieval
Architected AWS Data Infrastructure	Real-time ML inference at scale for high-volume transactional systems
Implemented ML Innovation Lab	+20% project success through AI/ML adoption
Developed AI-driven Client Tendering Solution	Improved accuracy and efficiency in client proposals

---

2025 CV ACHIEVEMENTS

- Accomplished the provision of an integrated Client tendering Solution from start to finish.

- Provided interactive solutions that were incorporated into OpenBet systems and solutions' core products. When the need arose for bespoke components, I collaborated with teams on both internal and external initiatives.
- Consulted and delivered multiple web applications and RDBMS solutions with a focus on utilizing Lean and AI principles.
- Experience in developing within Agile methodologies such as Scrum, Lean, and Kanban, as well as working on complex, high-volume, high-transaction systems.
- Delivered integrated technical solutions to address business problems and requirements
- Delivered interfaces and interactions specifications for core internal applications (eCommerce Platform & ERP) and external partners (EDI, web services)
- Data Architecture Reporting and Functional end to end specification across eCommerce, Commercial, Supply Chain and Customer Services (Azure DevOps)

2021 CV ACHIEVEMENTS

- Achieved diplomas from City & Guilds in critical areas of engineering, including 'Electrical Installations' (Buildings and Structures), 'Part P Building Regulations', 'Inspection and Testing', 'Wiring Regulations', and 'Domestic Installer Plus'.
- Delivered key vision and technology strategies for vital business sectors, including marketing and sales, revenue management, event planning, venue and space management, and food and beverages.
- Provided solution rollout of sales, end to end operational business, the technical BAU process, and the required adoption of EPOS (Lightspeed) and inventory management.
- Improved solution proofing and the adoption of business, after implementing tendered processes for technology suppliers.
- Encouragingly influenced company operations and provided solutions analysis, by using change management techniques to lead SAAS operations, white papers on best practices, and options papers for senior SMEs (CxOs)

2020 CV ACHIEVEMENTS

The Collective:
- Rollout and delivery of Sales end to end operational business and technical BAU process
- Rollout and delivery adoption of ePOS solution (LightSpeed) and Inventory Management solution
- Successfully tendered for technology suppliers for solution proofing and business adoption increasing revenue exponentially

Sainsbury's:
- Achieved Board level signoff of Big Data Analytics solutions (excess of 10PB and real-time system integration).
- Delivery of strategic Sainsbury's Big data initiatives surrounding Retail data and Transactional Information.
- Delivery of appropriate mentoring training materials and career progression for Junior BA's and Data Analysts.
- Establish project(s) structure and governance alignment with GDPR and emerging data governance policies, aligning these to manageable project gateways to ensure Privacy by design.
- Development of Internal BI product turning Data insights (retail/transactional) into store actionable processes effectively reducing store manager workload allowing for customer focus.

Knight Frank:
- Collated all Business, Functional and System Architecture specs for production of QlikView BI reporting

- Lettings Business entire systems data migration and process re-engineering.
- Inception and Implemented of a Lettings solution for Knight Frank single golden source and MDM CRM.
- £1.6mil RFP for a Lettings solution based on options I put forward to Knight Frank Strategy Board.
- £400k RFP for a single golden source database solution I incepted.
- £300k RFP for a data cleansing solution I incepted.
- Worked closely with CxO level execs to achieve Lettings (internal & external) Analytics solution on Big Data platform.
- Champion Upskilling, End solutions proof of concept presentation, Lead teams and demystify business data.

EARLY CAREER ACHIEVEMENTS (BARCLAYS ARCHV)

The National Lottery:
- Process re-engineering
- Legacy Reporting systems migration
- Requirement gathering
- Data governance and security consultancy (GDPR)

JLL (Jones Lang LaSalle):
- Delivered and integrated BI & MI solution (Business Processes, Data models and Mapping)
- Successful implementation of Data Governance Global strategy
- Progressed data governance and standards and change throughout Business service lines
- Global reporting solution migration from legacy silo business lines
- Implemented obfuscation principles for the purposes of Sales oriented demo of the solutions capabilities when facing off to clients
- Implemented a data layer for BI analysis

WorldPay:
- Delivered Business wide User reporting requirements and agreed solution for all reporting Internal and External financial reports
- Delivered the User Acceptance and Reporting schedule for all Business areas
- Mitigation of Operational Risk to BAU through Gap analysis of Data warehouse Big data architecture and the benefits of using apache Hive for data handling (Big data ETL)
- SharePoint Reporting and Document management
- UAT Process and Plans documented and implemented for migration programme
- BAU reporting process re-engineering in line with Big Data Lake capability and business need (Real-time reporting)

Shawbrook Bank:
- Implemented Single application sign on solution
- Ensured adherence to JMLSG guidelines via data automation solution for customer sign on
- Streamlined the PMO reporting function
- Re-engineered the client on boarding process for E-saving legacy product

Peabody:
- Developed and manage requirements with JIRA (Confluence)
- Led analysis and design of the Housing and other systems migration to Peabody systems and processes in collaboration with appropriate business units, and produce documentation of systems and data migration according to existing corporate standards and within Agile project management methodology
- Led Gap Analysis from Open Accounts to Sun Accounts V6.1 migration and ensured business users were fully involved in the sign off of migration requirements
- Evaluated and gained user acceptance of KPI and PI reporting to Peabody standards
- Acted as a key member of the Agile team: inputted into daily scrums, fortnightly sprint planning meetings and facilitated workshops

Lloyds Bank:
- Selected to Project manage the production of customer centric banking product requirements having become an SME
- Setup maintenance criteria and benchmarking for Customer Journeys and CRM processes throughout divestment
- Re-engineered and delivered the Customer Journeys and CRM solution for Sainsbury's Bank infrastructure (AML & KYC)
- Developed and achieved sign off of work-stream detailed requirements and functional spec to Target Operating Model (TOM)
- Developed and implemented a requirements gathering and traceability tool for use by the SAND Programme
- Built and Maintain Automated Business Performance Model
- Key team member on the re-engineering of Financial and PPI process models to facilitate the automation of the PPI calculations using Agile Project Methodology
- Developed traceability matrices for processes and Key Project Points
- Report, document and track weekly redress payment batches for Business Insight for all LTSB retail products (Cards, Loans, Mortgages)
- Designed and Implemented a Billing and Transactional PPI Database. Built BPM policy redress calculations into database logic and output
- Created PPI calculators, using MS Excel and Access to qualify the PPI estimate £3.6billion spend
- Automated and Consolidated all of data feeds required for PPI calculators including Data Transformation rules
- Built and delivered an Excel model to monitor and report on Billing transaction calculations used in the BPM (Business Performance Module)
- Streamlined the PMO function document management solution creating tools (Lists, Forms, Screens)in SharePoint for the purpose of document management
- Assisted the successful merger of Halifax Bank of Scotland and Lloyds Digital Banking
- Defined the customer journey: collating data from social media source systems

Manheim:
- Project Managed a .NET re-write development project
- Big data implementation and analysis (Hadoop/Hive)
- Successfully produced Business and functional spec documentation
- Benchmarked Testing documentation, UAT Test Scripts and Traceability Matrices Development Plan, reporting, Change process and migration plan
- Integrated of end to end Lead Management API with Salesforce for Customer data and sales metrics

Barclays (Clearly Business):
- End to End Business Analyst from inception to post-implementation of an in-house billing and sales system
- Implemented a solution for trend analysis in order to achieve a scalable CRM solution
- Automated VAT receipt production for billing
- Realized £1 million companywide billing saving through standardization and automation of all reconciliation processes in billing, bill payment and strategic Financial engagements
- By building a billings systems that encompassed all commercial sales and business attributes within 3 months which was quicker than the expected 9 month estimated delivery of the Billing system

---

SECTION 3: TECHNICAL SKILLS
(Complete Compendium from All Sources)

CLOUD & INFRASTRUCTURE

AWS (Primary):
- EC2, S3, Lambda, SageMaker, Redshift, Athena
- EventBridge, CloudWatch, VPC, IAM
- MWAA (Managed Apache Airflow)
- CloudFormation, Auto Scaling

Other Cloud:
- Azure

DATA PLATFORM & WAREHOUSING

- Snowflake
- Data Lakes
- ETL/ELT Pipelines
- Apache Airflow
- Spark
- Kafka
- Hadoop
- Hive
- Real-time Data Processing
- Data Architecture
- Data Governance (GDPR)

DEVOPS & INFRASTRUCTURE AS CODE

- Terraform
- CloudFormation
- CI/CD (Bitbucket Pipelines)
- Docker
- Kubernetes
- Monitoring & Alerting
- Infrastructure as Code

PROGRAMMING & LANGUAGES

Primary:
- Python (extensive production experience)
- SQL

Secondary:
- Scala
- Java
- JSON
- YAML
- DAX
- Visual Basic
- Shell Scripting
- Bash

ML/AI TECHNOLOGIES

- Machine Learning
- LLM (Large Language Models)
- RAG Pipelines
- NLP (Natural Language Processing)
- TensorFlow

- PyTorch
- scikit-learn
- OpenAI
- Vector Databases
- Semantic Search
- RAG (Retrieval-Augmented Generation)

BI/REPORTING & ANALYTICS

- QlikView
- Tableau
- Power BI
- Business Objects
- Cognos
- SAP Crystal Reports
- OBIEE
- Splunk
- Salesforce
- Advanced MS Excel
- Google Analytics
- HubSpot
- MicroStrategy
- Oracle Analytics

DATABASES

- Oracle
- Redshift
- PostgreSQL
- MS SQL Server
- RDBMS
- Access
- NoSQL

PROJECT MANAGEMENT & AGILE

- Agile
- Scrum
- Kanban
- JIRA
- Confluence
- Lean
- PRINCE2
- SharePoint
- Microsoft TFS
- Waterfall

OTHER TECHNOLOGIES

- APIs
- Microservices
- ETL
- .Net
- Apigee
- IaaS
- PaaS

- SaaS
- Cloud Native
- Data Lake
- ITIL
- MDM

DOMAINS & INDUSTRIES

- Financial Services
- Retail
- Betting/Gaming
- Travel
- Commercial Real Estate
- Banking
- Fintech
- RegTech

SECTION 4: PROFESSIONAL EXPERIENCE
(Complete Chronological Career History)

CURRENT ROLE

Business Solutions Architect
OpenBet (Scientific Games) | Jun 2022 - Present | Leeds, UK

From 2026 CVs:
- Gathered and analysed business requirements from stakeholders across Digital, Operations IT, and Global Business
- Designed and delivered technical solutions addressing complex business problems
- Created functional specifications and technical documentation
- Managed UAT and stakeholder sign-off processes
- Collaborated with development teams to ensure solution alignment with business needs

From 2026 CV - Solutions Architect:
- Architected scalable, cloud-native data infrastructure on AWS supporting high-volume, low-latency transactional systems
- Designed and delivered AI/ML solutions integrated into core betting platforms
- Led AI Innovation Lab driving 20% improvement in project success rates
- Created solution roadmaps aligning technical capabilities with business objectives
- Engaged C-suite stakeholders to validate solution architecture and obtain buy-in

From 2026 CV - Data Engineer:
- Architected and implemented scalable cloud-first data platform on AWS
- Built data lakes and ETL pipelines processing high-volume transactional data
- Developed Scala-based data processing solutions for complex transformations
- Implemented real-time data streaming with Kafka for instant analytics
- Created Infrastructure as Code using Terraform for reproducible environments
- Established CI/CD pipelines for data asset deployment

From 2026 CV - ML/AI Engineer:
- Developed and deployed production ML solutions for business-critical systems
- Built AI-driven Client Tendering Solution with predictive capabilities
- Implemented ML pipelines for real-time data processing and inference
- Architected cloud-native data infrastructure supporting ML workloads on AWS

- Led AI Innovation Lab introducing ML/AI capabilities to the organisation

From 2026 CV - AI Consultant:
- Architected scalable, cloud-native AI data infrastructure on AWS to support high-volume, low-latency transactional betting systems
- Led AI Innovation Lab driving +20% project success rate and reduced operational costs
- Developed AI-driven Client Tendering Solution improving accuracy and efficiency in client proposals
- Integrated AI/ML components into core betting systems enhancing functionality
- Collaborated with Digital, Operations IT, and Global Business functions to deliver seamless digital transformations
- Championed Agile methodologies (Scrum, Kanban) across cross-functional teams

From 2025 CV:
- In a dynamic business landscape driven by digital transformation, my role is instrumental in driving business change through leveraging digital platforms. As an Agile champion, I advocate for and implement Agile methodologies to ensure project success. My focus is on delivering seamless and timely business changes across digital platforms like ERP, CRM, CMS, and BI.
- Through collaboration with Digital, Operations IT, and Global Business functions, I ensure accurate capture of business requirements, alignment with strategic objectives, and timely delivery. I actively engage stakeholders at all levels to gain buy-in, facilitating a smooth transition and successful adoption of new technologies and processes. By championing Agile practices and promoting collaboration, I contribute to driving innovation, optimizing resources, and achieving sustainable business growth in the digital era.

PREVIOUS ROLES

Digital Business Data Analyst
GHD Hair | Jun 2021 - Jan 2022 | Leeds, UK

From 2026 CVs:
- Delivered integrated technical solutions across ERP, CRM, CMS, and BI platforms
- Created data architecture and functional specifications for eCommerce and Supply Chain
- Facilitated requirements gathering workshops with business stakeholders
- Produced BI reports and dashboards for executive decision-making

From 2025 CV:
- Delivering business change across Digital platforms such as ERP, CRM, CMS and BI. Champion Agile & Scrum and play a key role in fostering collaboration between Digital, Operations IT and Global Business.
- Delivered interfaces and interactions specifications for core internal applications (eCommerce Platform & ERP) and external partners (EDI, web services)
- Data Architecture Reporting and Functional end to end specification across eCommerce, Commercial, Supply Chain and Customer Services (Azure DevOps)

Electrical Engineer
Self-Employed | Feb 2020 - Dec 2021 | London, UK

From 2025 CV:
- Providing both indoor and outdoor installations, including final fixes, and installing a range of fire alarms and testing procedures.

Key Achievements:
- Achieved diplomas from City & Guilds in critical areas of engineering,

including 'Electrical Installations', 'Part P Building Regulations', 'Inspection and Testing', 'Wiring Regulations', and 'Domestic Installer Plus'. I proficiently installed and tested fire alarms to ensure the safety of buildings
- I earned diplomas in electrical installations, building regulations, and related fields from City & Guilds, demonstrating my commitment to professional growth and compliance

From 2021 CV:
- Providing both indoor and outdoor installations, including final fixes, and installing a range of fire alarms and testing procedures.

Technology Business Partner
The Collective | Jun 2019 - Dec 2019 | London, UK

From 2025 CV:
- Contributed to business technology objectives by engaging stakeholders and suppliers. Provided valuable advice and executed tech-related initiatives. Involved in pre-sales, RFP responses, and roadmap development. Guided technology rollout and adoption while pursuing improvements.

Key Achievements:
- Delivered key vision and technology strategies for vital business sectors:
  - Marketing and sales
  - Revenue management
  - Event planning
  - Venue and space management
  - Food and beverages
- Provided solution rollout:
  - Sales
  - End to end operational business
  - Technical BAU process
  - Required adoption of ePOS (LightSpeed) and inventory management
- Improved solution proofing and adoption of business:
  - Implemented tendered processes for technology suppliers

From 2020 CV:
- Define and achieve consensus with key stakeholders on Vision and Technology strategy for following business domains (Marketing & Sales, Revenue Management, Events, Venue and Space Management as well as Food and Beverage across the entire business estate)
- Take overall accountability for the performance, support and continual improvement of the technology within The Collective.
- Build and maintain (ex/internal) relationships to further business tech goals as part for the leadership team providing insight and advice to the business and wider business.
- Oversee the delivery of all tech and operations projects for all business areas.
- Work closely with CTO and Delivery Directors to incept/ assess and evaluate current and potential suppliers.

Senior Business Data Architect
Aldermore Bank (via KAINOS) | Oct 2018 - May 2019 | London, UK

From 2026 CVs:
- Delivered solution analysis reports and option papers for CRM data improvement
- Led discovery analysis and created documentation for project lifecycle
- Produced options papers for C-suite stakeholders

From 2025 CV:
- Implemented key initiatives such as discovery analysis, deep dive methodology,

documentation creation, project lifecycle management, and governance processes. Additionally, delivered well-documented solution analysis reports and option papers; produced by integrating API sources to enhance CRM data quality. Successfully delivered project deliverables, training sessions, user acceptance testing, and onboarding support to stakeholders at all levels.

Key Achievements:
- Demonstrated an ability to positively influence company operations and provide solutions analysis through the effective application of change management techniques. This included leading SaaS operations, developing white papers on best practices, and creating options papers for senior subject matter experts (CxOs).

From ARCHV:
- Discovery Phase Analysis, Deep dive, documentation and project lifecycle and governance.
- Responsible for documentation, solution analysis and option paper produced of API source integration for CRM data enrichment.
- Led successful analytics projects that streamlined business process and improved financial performance.
- Producing and agreeing project deliverables, Training, UAT and onboarding of users and stakeholders at all levels while working closely with Managers, Big Data Solution Architects, Jnr Business Analysts and Agile teams responsible for the delivery of the Big Data Solution as well as internal IT projects (IT process flows, BI Reporting, BAU IT and implementations).
- As a solutions-oriented Business, Product and Solutions analyst I was required to play a big part in influencing the way the company operates, while utilizing change management techniques to champion SAAS (software as a service) and underlying initiatives in addition to producing white papers on best practices (GDPR, FCA compliance, ISO certs) and options papers for Snr SMEs.

Digital Business Data Architect
Carlson Wagonlit Travel | Mar 2018 - Aug 2019 | UK, USA, Europe

From 2025 CV:
- Managed technical implementation team (5 BA, Hadoop and Hive specialists, data and solution architects) for large-scale global data analytics platform.
- Refined high-level into actionable technical requirements for data lake offering implementation.
- Analyzed and documented new data and BI product offerings.
- Prototyped, and produced requirements on custom solutions for internal and external clients.
- Conducted feasibility analysis and assessed pros, cons, and overall business fit of optional solutions.
- Collaborated with Product Scrum teams, managed project activities, impediments, and staff training.

From 2020 CV:
- Analyze and document New Data and BI Product offerings, prototype and produce requirements on custom solutions for internal and external clients. Provide optional solutions, with analyses on feasibility, pro/cons, strategic solution capability and overall business fit.
- Establish initial high-level requirement documentation based on business requirements for estimation purposes, as well as decomposition into business and subsequent technical requirements.
- Document all API's currently in use throughout the business and provide enrichment strategy options.
- Analyze the high-level requirements for feasibility in view of:
  - Current Data Lake using related toolset (Hadoop, SQL, R)
  - Oracle based Enterprise Data-Warehouse
- Prototype a solution of large-scale global data analytics platform.
- Data Modelling

- Work with DBA's on Data Loads into sandbox
- Reporting layer (Cognos)
- API revision and documentation (Micro services integration)
- Manage technical Implementation team (5 BA's, Hadoop and Hive specialists, Data and Solution Architects)
- Integrate with an Agile Scrum teams throughout the business (defining new processes, integrating with existing processes, defining roles and responsibilities and procedures).
- Worked closely with Product Scrum teams throughout the business as a Hybrid Product Owner to build and prioritize user stories for Developer, UAT, QA, and other Business Analysts.
- Managed project activities as well as known impediment/issues, training and up skilling of staff and SMEs.
- Raised issues to relevant Snr Stakeholders on progress, issues, impediments that may affect product timelines
- Ownership of all assigned tasks and project related assignments.
- Refined high level requirements and prototype into actionable technical requirements that will be the inputs for the development team for implementation on our data lake offering.
- Ensured transition/support to the Oracle Based Data-Warehouse/Business Intelligence teams.
- Creation of UAT test cases, test KPI and subsequent fit for purpose.

Technology Lead Business Data Analyst
Sainsbury's (Holborn) | Jun 2017 - Dec 2017 | London, UK

From 2025 CV:
- Achieved Board approval for Big Data Analytics solutions (10PB+ and real-time system integration)
- Delivered strategic Sainsbury's Big Data initiatives for Retail data and Transactional Information
- Provided appropriate mentoring, training materials, and career progression for Junior BAs and Data Analysts
- Established project structure and governance aligned with GDPR and emerging data governance policies
- Developed Internal BI product turning Data insights (retail/transactional) into actionable processes

From 2020 CV:
- Working closely with Sainsburys Business, Data Governance and GDPR IT leads on multiple project initiatives to realize business gains through focusing on utilizing Sainsburys Data Lake Big Data and BI analysis and data sciences platform.
- Work with Design and Architecture leads to achieve strategic Big Data Initiatives.
- Monitoring and controlling of the projects to deliver the scope, to time and budget.
- Turn analytical and reporting business requirements into technical specifications and identify key data needs.
- Capture both functional and non-functional business requirements for data solutions that enable great reporting, analysis and data science.
- Support the enhancement of data models and solution designs across a range of capabilities so that the right data solutions and layers can be developed.
- Undertake requirements gathering as well as support rapid discovery, prototyping (UI/UX) and data science which can subsequently be turned into production solutions.
- Analyze data sources and identify gaps between non-technical business requirements and technical realities for multiple projects.
- Establish project workflows to align to design and architecture agreed project reporting strategy using Agile tools like JIRA to document and store requirements, business rules, transformation logic, governance strategy and GDPR policies.

- Capture business data quality rules and data cleansing rules.
- Validate the process metadata and row level traceability captured in a metadata hub.
- Work with Product Manager and Test Leads to establish appropriate testing benchmarks.
- Manage BA's and establish appropriate BA process, artefacts and business engagements procedures.
- Triage and impact assess Projects prior to requirement gathering, providing accurate estimates that are subsequently delivered against.
- Critique Junior BA requirements gathered and align to product Backlog, mentoring gathering process and assessing requirement gathering effectivity.
- Ensured all program technical requirements are captured at the appropriate level that documentation evolves through the process containing necessary functional and non-functional requirements.

Data Business Architect
The National Lottery (Camelot Group) | Apr 2017 - Jun 2017 | London, UK

From 2025 CV:

---

SECTION 5: PORTFOLIO & TECHNICAL DEMONSTRATIONS

IntelliGrowth-AI (Technical Demonstrations)
Founder | Jan 2020 - Present | Remote

MIRA - ACCT (Artificial Contextual Cognition and Thinking):
- Built complete AI system with Python as primary language
- Implemented RAG (Retrieval-Augmented Generation) pipelines for knowledge retrieval
- Integrated multiple LLM providers (OpenAI, Claude, Gemini)
- Created vector-based memory using embeddings and semantic search
- Developed autonomous workflow generation capabilities
- Demonstrates production ML lifecycle: data → training → inference → iteration
- Autonomous cognitive computing system demonstrating advanced architecture capabilities

Technical Stack Demonstrated:
- LLM orchestration and prompt engineering
- Vector databases for semantic search
- Function calling and tool use with LLMs
- Multi-agent systems with specialized personas
- Continuous learning and knowledge consolidation

SECTION 6: EDUCATION & CERTIFICATIONS

EDUCATION

Qualification	Institution	Year
BSc (Hons) Business Information Systems, 2:1	Leeds Metropolitan University	2007

SECURITY CLEARANCE

SC Clearance: Eligible/Available for upgrade

Willing to undergo enhanced security vetting for roles requiring clearance.

SECTION 8: COMPETENCIES INDEX
(Complete List from All Sources)

BUSINESS SKILLS

- Business requirements analysis and solution design
- Data-driven decision making and analytics
- Stakeholder engagement across all organizational levels
- Agile project delivery and process optimization
- Technical understanding of data platforms and cloud solutions
- Enterprise architecture and solution design
- Cloud-native platform development (AWS)
- AI/ML solution implementation
- Stakeholder management and C-suite communication
- End-to-end project delivery
- C-Suite Engagement
- Financial Services & Advisory
- Discovery Phase
- Cross-functional Team Leadership
- Data & Big Data Analysis
- Business Solution Delivery
- Enterprise Architecture
- Project & Product Management
- Strategic Transformation
- Technical Analysis
- Automation (ML&AL)
- Asset Management
- Process Design
- MDM

- Technical Documentation
- Stakeholder Management
- Finance & Banking
- Discovery
- KPI & KCI inception
- Data Discovery & Visualisation
- BI MI Reporting
- Relational & Cloud Database Solutions
- CI|CD
- Data integration
- TOM
- Product Backlog
- Business & Technical Documentation
- TDD & BDD
- Regulatory Change
- Regulatory Reporting
- Operational and Process improvement
- Change and Transformation Projects
- Commercial speculation/viability

TOOLS & PLATFORMS

- AWS (EC2, S3, Lambda, SageMaker, Redshift, Athena, EventBridge, CloudWatch, VPC, IAM)
- Azure
- Snowflake
- Apache Airflow
- Spark
- Kafka
- Hadoop
- Hive
- Terraform
- CloudFormation
- Docker
- Kubernetes
- JIRA
- Confluence
- QlikView
- Tableau
- Power BI
- Business Objects
- Cognos
- Salesforce
- MS Excel
- SQL
- Python
- Scala
- Java
- JSON
- YAML
